

MALIKAL RIZKY

Senior Security Software Engineer

hi@malikal.dpdns.org linkedin.com/in/mri_k_abdillah github.com/malikalri_k

PROFESSIONAL SUMMARY

Security engineer with 6+ years across enterprise identity (SAML/OIDC, workload federation, PAM), cloud IAM governance, and SOC-scale detection and incident response. Built IAM automation and in-house SOC/SOAR platforms for regulated fintech (Bank Jago, BFI). AWS Cloud Architect; Certified Ethical Hacker.

EXPERIENCE

DKATALIS

Indonesia-headquartered fintech technology company Regional collaboration: Indonesia and Singapore engineering and security stakeholders.

Promoted from Security Engineer — DevSecOps

Jan 2025 – Present | Full-time

- Lead incident command for identity and federation outages, cloud, endpoint, and phishing events; cut containment time 60%+ via SOAR enrichment, prioritization, and escalation.
 - Operationalize SOC playbooks and SOAR-driven automations mapped to MITRE ATT&CK enrichment, correlation, deduplication, automated triage to raise analyst throughput and 24/7 consistency.
 - Built in-house SOC/SOAR platform (correlation, threat intelligence enrichment, detection/response, blocking) for Bank Jago and BFI, reducing repetitive manual investigations.
 - Delivered IdP-integrated kill-switch automation to accelerate workforce and application access revocation during incidents.
 - Expanded detection coverage across multi-cloud, Kubernetes, and SaaS identity with Watchdog, Google Security Command Center, and CrowdStrike Falcon.
 - Translate SOC risk and trend data into stakeholder-readable reporting, improving cross-functional alignment and audit/compliance readiness.
 - Partner with platform engineering on golden-image and immutable baseline practices (including Packer-style image pipelines) to reduce manual hardening drift across cloud workloads.
 - Tune Cloudflare WAF rules and managed protections for internet-facing services, improving signal-to-noise and application-layer coverage.
-

Jun 2024 – Dec 2024 | Full-time

- Owned IAM and identity security across AWS/GCP: least privilege, DLP, and periodic access reviews for Bank Jago and BFI.
- Led WASCSPM remediation across AWS/GCP; closed critical misconfigurations and reached maximum organizational posture score via IAM hardening and guardrails.
- Standardized SSO and identity lifecycle with Google Workspace SAML, OAuth2/OIDC, and automated offboarding to reduce orphaned access.
- Replaced long-lived keys with GitLab OIDC to GCP workload identity for GKE CI/CD at Bank Jago and BFI.
- Operated CyberArk PAM and built a self-service IAM platform with approvals, ephemeral access, and automated service-account key rotation.
- Implemented GCP organization, folder, and project policy governance with automated remediation using Terraform, Cloud Functions, Policy Intelligence, and custom API tooling to remove excessive privileges and stale IAM bindings.
- Designed secure partner access architecture for GCP Cloud Storage using IP-restricted bucket policies and temporary service account credential workflows; contributed upstream `ip_filter` support merged into `terraform-google-cloud-storage` v12.0.0.
- Lead SecOps on-call response across SIEM, endpoint, identity, and cloud telemetry, managing the full lifecycle from alert triage and containment through remediation and post-incident review.

- Embedded security controls into CI/CD pipelines including secret scanning, Terraform-aligned IAM patterns, and preventive security checks to reduce exploitable risks before production deployment.
- Sole-led development of an LLM-powered security code review engine, reducing manual review time by 50% while improving secure development workflows.

Grab

Singapore-headquartered superapp and technology company Regional collaboration: Southeast Asia platform and product security stakeholders.

Dec 2023 – Jun 2024 | Full-time

- Built LLM-powered SAST/DAST triage engine, reducing false positives 85% and accelerating secure SDLC adoption across CI/CD pipelines.
 - Established AI-assisted AppSec triage standards and pipeline guardrails for high-volume engineering teams.
 - Tuned SIEM, EDR, and cloud-native detections for distributed microservices, improving actionable alert visibility.
 - Aligned DevSecOps with Google Workspace and JumpCloud identity anchors; optimized Cloudflare WAF for production microservices.
 - Partnered with platform and product security stakeholders to align DevSecOps controls across enterprise and fintech operating scope.
-

Jun 2023 – Dec 2023 | Full-time

- Built in-house cloud observability platform unifying logs, metrics, and threat intelligence for investigations and squad-level visibility.
- Designed enterprise IAM, SSO, and Zero Trust infrastructure access models improving governance and auditability.
- Enabled security control mapping and evidence readiness for industry frameworks and regional regulator requirements.
- Partnered with platform teams on golden-image pipelines and hardened, immutable baselines for AWS and GCP workloads.
- Partnered with engineering and governance teams to embed cloud security standards that scale consistently across business-critical services.

Maxim Order Service

Global food and goods delivery technology company Regional collaboration: engineering and operations across 10 countries and 100+ cities.

Jun 2022 – Jun 2023 | Full-time

- Reduced system downtime by 30% by deploying ELK Stack, Grafana, Prometheus, and New Relic for real-time observability and faster root-cause analysis.
- Accelerate infrastructure provisioning by 35% through Terraform-based Infrastructure as Code and repeatable platform workflows.
- Cut monthly AWS cloud costs by 25% through right-sizing, reserved instances, and auto-scaling optimizations.

Tofu

Japan-headquartered BPO and employer-of-record (EOR) platform technology company Regional collaboration: GCP security, Sprinto compliance, and Auth0/OIDC for platform clients including GoGlobal.

Jun 2022 – Jun 2023 | Freelance

- Led SOC 2 and ISO 27001 certification readiness on GCP with Sprinto; coordinated evidence, control mapping, and remediation to successful certification.
- Configured Auth0 client authentication for Tofu's BPO/EOR platform including GoGlobal with OIDC/OAuth2 flows and SSO for customer-facing services.
- Closed hundreds of Sprinto-tracked vulnerabilities and cloud misconfigurations to zero, clearing audit blockers on GCP.

- Hardened delivery for Hasura-backed services with GitHub Actions security controls and GCP-aligned DevSecOps practices for engineering teams.

Virtualspirit

Malaysia-headquartered IT services and cloud engineering company Regional collaboration: infrastructure and DevOps for clients including Malaysia's EV Connection.

Jun 2022 – Jun 2023 | Freelance

- Achieved 99.95% uptime by architecting robust microservices infrastructure using Kubernetes for EV Connection and other clients.
- Reduced cloud costs by 30% and cut release time by 25% through right-sizing, reserved instances, and optimized CI/CD pipelines.
- Deployed 5+ production applications for EV Connection within six months, achieving a 98% successful deployment rate.

Hungryhub

Thailand-headquartered restaurant reservation and food-tech platform Regional collaboration: product and engineering teams for Hungryhub's Thailand market.

Jun 2020 – Jun 2022 | Full-time

- Drove a 30% increase in user bookings by optimizing platform performance and reliability for Hungryhub's Thailand market.
- Achieved 99.8% uptime with Kubernetes and ELK-based proactive monitoring, resolving 95% of issues before user impact.
- Reduced cloud costs by 15% through efficient resource management, auto-scaling, and reserved instance strategies.

EDUCATION

Utel University

Computer Engineering | Jan 2023 – May 2025

- Project: Built a real-time streaming pipeline utilizing Apache Kafka, Spark Streaming, and Elasticsearch/Kibana for live social media data analysis.

Gadjah Mada University

Engineering Physics | Aug 2016 – Jul 2020

- Project: Convolution Neural Network Models for Acute Lymphoblastic Leukemia Diagnosis

CERTIFICATIONS

- AWS Cloud Architect - Amazon Web Services (AWS)
- Certified Ethical Hacker - EC-Council
- Palo Alto Networks Certified - Palo Alto Networks
- AWS Security: Incident Response on AWS - Amazon Web Services (AWS)
- Google Cloud Security Professional Certificate - Coursera / Google

SKILLS

Identity & access: IAM, SSO, SAML, OAuth2/OIDC, workload identity federation, CiberArk, Auth0, Google Workspace, JumpCloud, DLP Cloud security & SOC: AWS, GCP, Terraform, Kubernetes, Wireshark, CSPM, SIEM/SOAR, Wireshark, Google SCC, CrowdStrike Falcon, MITRE ATT&CK DevSecOps & engineering: CI/CD, GitLab, GitHub Actions, secret scanning, Cloudflare/AWS WAF, incident response, ISO 27001, ELK, Grafana, Prometheus
