

Summary

Lead security engineer with 6+ years leading & building security engineering initiatives across cloud infrastructure, IAM, SOC, and DevSecOps environments in multinational fintech and platform organizations. Built IAM automation, SOAR workflows, and detection engineering platforms across AWS/GCP environments for regulated organizations including Bank Jago and BFI.

Experience

DKATALIS

Led security operations and engineering initiatives across Bank Jago and BFI environments within DKATALIS regional fintech operations.

Lead Security Engineer — SOC

Promoted from Security Engineer — DevSecOps

Jan 2025 – Present | Full-time | Permanent

- Lead 24×7 SOC incident command for Bank Jago and BFI across identity, cloud, endpoint, and phishing; cut containment time 60%+ via SOAR-driven enrichment, prioritization, and escalation.
- Built in-house SOC platform with correlation, threat intel enrichment, detection/response, blocking, and pentesting workflows—reducing manual investigations and standardizing analyst workflows.
- Operationalized MITRE ATT&CK-aligned playbooks with automated enrichment, correlation, deduplication, and triage to improve analyst throughput and 24×7 consistency.
- Delivered IdP-integrated kill-switch automation; expanded detection coverage across multi-cloud, Kubernetes, and SaaS identity (Wazuh, Google SCC, CrowdStrike).

Security Engineer — DevSecOps

Jun 2024 – Dec 2024 | Full-time | Permanent

- Owned AWS/GCP IAM for regulated fintech—least privilege, DLP, and access reviews; led Wiz CSPM remediation to maximum organizational posture score.
- Standardized enterprise SSO and identity lifecycle (Google Workspace SAML, OAuth2/OIDC) with automated offboarding to reduce orphaned access.
- Replaced long-lived CI/CD keys with GitLab OIDC to GCP workload identity for GKE at Bank Jago and BFI.
- Built self-service IAM with CyberArk PAM, ephemeral access, and Terraform/Cloud Functions automation for IAM remediation and CI/CD secret scanning.

Grab

Singapore-headquartered superapp company

Security Engineer — DevSecOps

Dec 2023 – Jun 2024 | Full-time | Contract

- Built LLM-powered SAST/DAST triage engine reducing false positives 85% across high-volume CI/CD pipelines.
- Established AI-assisted AppSec triage standards and pipeline guardrails for distributed engineering teams.
- Tuned SIEM, EDR, and cloud-native detections for distributed microservices, improving actionable alert signal for platform teams.
- Aligned DevSecOps with Google Workspace/JumpCloud identity anchors; optimized Cloudflare WAF for production microservices.

Security Engineer — Cloud Infrastructure

Jun 2023 – Dec 2023 | Full-time | Contract

- Built in-house cloud observability platform unifying logs, metrics, and threat intelligence for investigations and squad-level visibility.
- Designed enterprise IAM, SSO, and Zero Trust infrastructure access models improving governance and auditability.
