

MALIKAL RIZKY

Lead SOC Security Engineer

hi@malikal.dpdns.org | linkedin.com/in/mrizkyabdillah | github.com/malikalrizky

PROFESSIONAL SUMMARY

Security engineer with 6+ years across paved-road DevSecOps, cloud security platforms, and SOC-scale operations on AWS and GCP. At DKATALIS, engineers security automation and identity-anchor patterns for Bank Jago and BFI IAM and Security-as-Code with Terraform and Google Workspace, CI/CD security, and Zero Trust, alongside detection engineering and SOAR automation. Proven builder of LLM-powered security tooling and shift-left pipeline controls; drives MTTD/MTTR and compliance readiness. AWS Cloud Architect and Certified Ethical Hacker.

EXPERIENCE

Lead Security Engineer, SOC Security Operations Center | DKATALIS

2025 - Present | Full-time

Lead 24x7 SOC operations at DKATALIS across Bank Jago and BFI, owning incident response strategy, detection engineering, threat hunting, and automation across AWS, GCP, Kubernetes, endpoints, and identity systems in multi-country environments.

- Drive end-to-end incident command for identity, cloud, endpoint, and phishing events, cutting containment time by over 60% through tighter triage and escalation workflows.
- Scale detection and response coverage across AWS, GCP, Kubernetes, and SaaS identity surfaces using Wazuh, Google Security Command Center, and CrowdStrike Falcon, increasing monitoring depth and reducing blind spots in production systems.
- Operationalize SOC playbooks and SOAR-driven automations mapped to MITRE ATT&CK to reduce MTTD and MTTR, lower false positives, improve analyst throughput, and standardize 24x7 monitoring and triage response quality.
- Built in-house SOC tooling at DKATALIS — unified SIEM-style correlation, threat intelligence, detection and response, and blocking — supporting Bank Jago and BFI SOC operations.
- Translate SOC risk and trend data into stakeholder-ready reporting, improving cross-functional alignment and audit/compliance readiness.
- Built SOC-driven kill-switch automation for rapid workforce and application access revocation via corporate IdP integrations, supporting HR offboarding and incident containment.
- Partner with platform engineering on golden-image and immutable baseline practices (including Packer-style image pipelines) to reduce manual hardening drift across cloud workloads.
- Tune Cloudflare WAF rules and managed protections for internet-facing services, improving signal-to-noise and application-layer coverage.

Security Engineer, DevSecOps | DKATALIS

2024 - 2025 | Full-time

Secure identity and cloud operations for Bank Jago and BFI at DKATALIS across AWS and GCP while serving as primary SecOps on-call, owning detection-to-remediation workflows and strengthening governance controls that support progression to Lead SOC.

- Own IAM and identity security governance across AWS and GCP, including DLP governance, enforcing least-privilege access and improving access control and data protection maturity at scale.

- Align infrastructure and application access with corporate workforce identity using Google Workspace where deployed for workforce integration, SSO to apps, and governance reviews.
- Automate identity lifecycle and access revocation with corporate IdP integrations to tighten offboarding and reduce orphaned access.
- Deliver self-service access request and approval workflows with engineering and identity stakeholders to reduce manual IAM overhead while preserving least-privilege and auditability.
- Lead SecOps on-call response across SIEM, endpoint, and cloud telemetry, handling the full lifecycle from alert triage through containment and post-incident review.
- Embed security controls into CI/CD pipelines, including secret scanning and Terraform-aligned IAM patterns, partnering with engineering to reduce exploitable risk before production release.
- Solely led development of an LLM-powered security code review engine, reducing review time by 50%.
- Drive control hardening and incident learnings that materially improve audit posture and support promotion into Lead SOC Security Operations Center leadership.

Security Engineer, DevSecOps | Grab

2023 - 2024 | Full-time

Scale DevSecOps practices across Grab and OVO environments by combining AI-assisted triage, CI/CD security guardrails, and SIEM-driven detection improvements for high-volume engineering organizations.

- Solely led development of an LLM-powered code triaging engine, reducing SAST/DAST false positives by 85%.
- Establish AI-assisted AppSec triage standards and security guardrails that improve engineering adoption of secure SDLC controls across CI/CD pipelines.
- Deploy and tune SIEM, Wazuh, EDR (CrowdStrike Falcon), and cloud-native monitoring (Google Security Command Center) use cases for distributed microservices, increasing actionable detection visibility across cloud workloads.
- Align DevSecOps controls with corporate identity-anchor patterns using Google Workspace and JumpCloud, and optimize Cloudflare WAF rulesets for production microservices.
- Partner with platform and product security stakeholders to align DevSecOps controls across enterprise and fintech operating scope.

Security Engineer, Cloud Infrastructure | Grab

2023 - 2024 | Full-time

Design and operate cloud security architecture for Grab and OVO workloads on AWS and GCP, strengthening resilience, governance, and compliance enablement across large-scale platforms.

- Build an in-house cloud observability platform that unifies logs, metrics, and threat intelligence for investigations and engineering-manager visibility into squad security and reliability signals.
- Partner with platform teams on golden-image pipelines and hardened, immutable baselines for AWS and GCP workloads.
- Design enterprise IAM, SSO, and Zero-Trust infrastructure access models that improve access governance, auditability, and risk reduction across teams.
- Enable security control mapping and evidence readiness against industry frameworks and regional regulatory requirements.
- Partner with engineering and governance teams to embed cloud security standards that scale consistently across business-critical services.

DevSecOps Engineer, Infrastructure and Platform | Maxim Order Service

2022 - 2023 | Full-time

Lead infrastructure and DevSecOps operations for Maxim Foods & Goods across 100+ cities in 10 countries, improving cost efficiency, reliability, and delivery speed on AWS.

- Cut monthly AWS cloud costs by 25% through right-sizing, reserved instances, and auto-scaling optimizations.
- Reduce system downtime by 30% by deploying ELK Stack, Grafana, Prometheus, and New Relic for real-time observability and faster root-cause analysis.
- Accelerate infrastructure provisioning by 35% through Terraform-based Infrastructure as Code and repeatable platform workflows.
- Strengthen operational maturity and scalability across multi-country environments by standardizing platform security and reliability practices.
- Collaborate with engineering on AWS WAF and edge protection for AWS-hosted production services.

DevOps Engineer | Virtualspirit

2022 - 2023 | Freelance

Delivered cloud infrastructure and DevOps services as an IT vendor for clients including EV Connection - Malaysia's leading EV charging station provider - achieving 99.95% uptime through Kubernetes and CI/CD automation.

- Achieved 99.95% uptime by architecting robust microservices infrastructure using Kubernetes for EV Connection and other clients.
- Deployed 5+ production applications for EV Connection within six months, achieving a 98% successful deployment rate.
- Reduced cloud costs by 30% and cut release time by 25% through right-sizing, reserved instances, and optimized CI/CD pipelines.
- Implemented edge security configurations including WAF-related controls for client production environments.

DevOps Engineer / Site Reliability Engineer | Hungryhub

2020 - 2022 | Full-time

Drove platform reliability and growth for Thailand's leading restaurant reservation platform, achieving 99.8% uptime and a 30% increase in user bookings through infrastructure optimization and SRE practices.

- Drove a 30% increase in user bookings by optimizing platform performance and reliability for Hungryhub's Thailand market.
- Achieved 99.8% uptime with Kubernetes and ELK-based proactive monitoring, resolving 95% of issues before user impact.
- Reduced cloud costs by 15% through efficient resource management, auto-scaling, and reserved instance strategies.

EDUCATION

Utel University

Computer Engineering (online) | 2023 - 2025

- Project: Built a real-time streaming pipeline utilizing Apache Kafka, Spark Streaming, and Elasticsearch/Kibana for live social media data analysis.
- Completed online curriculum alongside earning professional certifications in AWS, Google Cloud, and cybersecurity (credentials listed below).

Gadjah Mada University

Engineering Physics | 2016 - 2020

- Project: Convolution Neural Network Models for Acute Lymphoblastic Leukemia Diagnosis
- Project: Analysis of the Radioactivity Yield of Fluorine-18 from the Reaction of $^{18}\text{O}(p,n)^{18}\text{F}$ with Proton Beam Current Variations at the Medical Cyclotron Facility in Dharmas Hospital National Cancer Center BATAN (National Nuclear Energy Agency)
- Project: Applying Deep Learning for the Optimization and Sustainability of Lithium Ferrophosphate (LFP) Batteries in Renewable Energy Applications

CERTIFICATIONS

- AWS Cloud Architect - Amazon Web Services (AWS)
- Certified Ethical Hacker - EC-Council
- Palo Alto Networks Cybersecurity - Palo Alto Networks
- AWS Security: Incident Response on AWS - Amazon Web Services (AWS)
- Google Cybersecurity Professional Certificate - Coursera / Google
- Preparing for Google Cloud Professional Data Engineer Certification - Coursera / Google Cloud
- Google Advanced Data Analytics Professional Certificate - Coursera / Google
