

Malikal Rizky

Lead Senior Security Software Engineer — Platform, Identity & Detection

hi@malikal.dpdns.org
linkedin.com/in/mrizkyabdillah
github.com/malikalrizky

Summary

Lead security engineer with 6+ years leading & building security engineering initiatives across cloud infrastructure, IAM, SOC, and DevSecOps environments in multinational fintech and platform organizations. Built IAM automation, SOAR workflows, and detection engineering platforms across AWS/GCP environments for regulated organizations including Bank Jago and BFI.

Experience

DKATALIS

Led security operations and engineering initiatives across Bank Jago and BFI environments within DKATALIS regional fintech operations.

Lead Security Engineer — SOC

Promoted from Security Engineer — DevSecOps

Jan 2025 – Present | Full-time | Permanent

- Lead 24×7 SOC incident command for Bank Jago and BFI across identity, cloud, endpoint, and phishing; cut containment time 60%+ via SOAR-driven enrichment, prioritization, and escalation.
- Built in-house SOC platform with correlation, threat intel enrichment, detection/response, blocking, and pentesting workflows—reducing manual investigations and standardizing analyst workflows.
- Operationalized MITRE ATT&CK-aligned playbooks with automated enrichment, correlation, deduplication, and triage to improve analyst throughput and 24×7 consistency.
- Delivered IdP-integrated kill-switch automation; expanded detection coverage across multi-cloud, Kubernetes, and SaaS identity (Wazuh, Google SCC, CrowdStrike).

Security Engineer — DevSecOps

Jun 2024 – Dec 2024 | Full-time | Permanent

- Owned AWS/GCP IAM for regulated fintech—least privilege, DLP, and access reviews; led Wiz CSPM remediation to maximum organizational posture score.
- Standardized enterprise SSO and identity lifecycle (Google Workspace SAML, OAuth2/OIDC) with automated offboarding to reduce orphaned access.
- Replaced long-lived CI/CD keys with GitLab OIDC to GCP workload identity for GKE at Bank Jago and BFI.
- Built self-service IAM with CyberArk PAM, ephemeral access, and Terraform/Cloud Functions automation for IAM remediation and CI/CD secret scanning.

Grab

Singapore-headquartered superapp company

Security Engineer — DevSecOps

Dec 2023 – Jun 2024 | Full-time | Contract

- Built LLM-powered SAST/DAST triage engine reducing false positives 85% across high-volume CI/CD pipelines.
- Established AI-assisted AppSec triage standards and pipeline guardrails for distributed engineering teams.
- Tuned SIEM, EDR, and cloud-native detections for distributed microservices, improving actionable alert signal for platform teams.
- Aligned DevSecOps with Google Workspace/JumpCloud identity anchors; optimized Cloudflare WAF for production microservices.

Security Engineer — Cloud Infrastructure

Jun 2023 – Dec 2023 | Full-time | Contract

- Built in-house cloud observability platform unifying logs, metrics, and threat intelligence for investigations and squad-level visibility.
- Designed enterprise IAM, SSO, and Zero Trust infrastructure access models improving governance and auditability.

- Enabled security control mapping and evidence readiness for industry frameworks and regional regulatory requirements.

Maxim Order Service

Global food and goods delivery technology company

DevSecOps Engineer, Infrastructure and Platform

Jun 2022 – Jun 2023 | Full-time | Contract

- Cut monthly AWS costs 25% and system downtime 30% via right-sizing, reserved instances, and ELK/Grafana/Prometheus observability.
- Accelerated infrastructure provisioning 35% with Terraform IaC and standardized platform security across multi-country operations.

Hungryhub

Thailand-headquartered restaurant reservation and food-tech platform

DevOps Engineer / Site Reliability Engineer

Jun 2020 – Jun 2022 | Full-time | Contract

- Achieved 99.8% uptime with Kubernetes and ELK-based monitoring, resolving 95% of issues before user impact.
- Drove 30% booking growth and 15% cloud cost reduction via performance tuning, auto-scaling, and reserved-instance strategy.

Independent Security & DevSecOps Consultant

Southeast Asia & Japan · Jan 2021 – Present · Freelance · Project

- Delivered SOC 2 and ISO 27001 readiness on GCP with Sprinto; closed hundreds of cloud vulnerabilities and audit blockers for Japan-based BPO/EOR platforms including GoGlobal.
- Built Kubernetes microservices and observability for regional clients—99.95% uptime, up to 30% cloud cost reduction.
- Implemented OIDC/SSO with Auth0, Google Workspace, and workload identity federation across customer-facing platforms and CI/CD systems.
- Designed multi-country DevSecOps and monitoring with Terraform, ELK, Grafana, and Prometheus supporting operations across 10+ countries.

Selected Clients: Tofu (Japan), Virtualspirit (Malaysia), EV Connection (Malaysia), EngageRocket (Singapore), Tebengan (Indonesia)

Skills

Cloud & Infrastructure: AWS, GCP, Kubernetes, Terraform, Docker, Cloudflare/AWS WAF, Wiz CSPM, Google SCC

IAM & Identity Security: SSO, SAML, OAuth2/OIDC, workload identity federation, CyberArk PAM, Auth0, Google Workspace, JumpCloud, ManageEngine

Security Operations: Wazuh, CrowdStrike, Trend Micro XDR, SIEM/SOAR, incident response, detection engineering

Application Security: SAST/DAST, Semgrep, secure SDLC, API security, CI/CD security, secret scanning, threat modeling, penetration testing, security architecture

Governance & Compliance: ISO 27001, SOC 2, Sprinto

Programming & Automation: Python, Bash, JavaScript, Golang, SQL

Certifications

AWS Cloud Architect, Certified Ethical Hacker, Palo Alto Networks Cybersecurity, AWS Security: Incident Response on AWS, Google Cybersecurity Professional Certificate

Education

Utel University — Computer Engineering · Jan 2023 – May 2025

Gadjah Mada University — Engineering Physics · Aug 2016 – Jul 2020
