Summary

Tech lead with 6+ years of experience in DevSecOps, platform engineering, cloud infrastructure, and security automation across AWS/GCP environments. Experienced building SOC, IAM, observability, and detection engineering platforms for multinational fintech and technology organizations.

Experience

DKATALIS | Tech Lead — SOC & Security Engineering (Bank Jago & BFI)

Promoted from Security Engineer — DevSecOps

Jan 2025 – Present | Full-time | Permanent

- Led SOC engineering and response automation initiatives across Bank Jago and BFI regulated fintech environments, reducing incident containment time by 60%+ through SOAR-driven enrichment, prioritization, and escalation workflows supporting critical banking operations.
- Architected and led development of centralized SOC detection and response platform integrating threat intelligence, SOAR enrichment, EDL management, AI-assisted threat hunting, pentest workflows, and MITRE ATT&CK-aligned playbook orchestration pipelines—standardizing investigation and remediation workflows across critical cloud and identity assets while reducing manual investigations by 50%+.
- Designed IdP-integrated kill-switch and containment orchestration workflows across distributed cloud and SaaS environments—reducing high-risk account containment execution time by 90%+ from approximately 15 minutes to under 1 minute.

Security Engineer — DevSecOps

Jun 2024 – Dec 2024 | Full-time | Permanent

- Led AWS/GCP IAM and platform security initiatives for regulated fintech environments including least-privilege enforcement, DLP controls, and enterprise access governance.
- Improved cloud security posture to maximum Wiz CSPM organizational score through large-scale remediation and security standardization initiatives.
- Standardized enterprise SSO and identity lifecycle automation using Google Workspace, SAML, OAuth2/OIDC, and automated offboarding workflows reducing orphaned access and manual provisioning effort.
- Modernized CI/CD authentication by replacing long-lived credentials with GitLab OIDC and GCP workload identity federation across GKE environments.

Grab | Security Engineer — DevSecOps

Dec 2023 – Jun 2024 | Full-time | Contract

- Built LLM-powered SAST/DAST triage platform reducing false positives by 85% across high-volume CI/CD pipelines supporting globally distributed engineering environments.
- Defined AI-assisted AppSec triage standards and scalable DevSecOps guardrails for globally distributed engineering teams and large-scale microservices platforms.
- Improved actionable detection quality across SIEM, EDR, and cloud-native monitoring systems by tuning detection logic for distributed production workloads and reducing operational alert noise for platform teams.

Security Engineer — Cloud Infrastructure

Jun 2023 – Dec 2023 | Full-time | Contract

- Built centralized in-house cloud observability platform integrating logs, metrics, and threat intelligence pipelines improving investigation visibility and engineering monitoring coverage.
- Designed enterprise IAM, SSO, and Zero Trust infrastructure access architecture improving governance, auditability, and operational scalability across cloud environments.
- Enabled security evidence readiness and control mapping initiatives supporting regional compliance and audit requirements.

Maxim Order Service | DevSecOps Engineer, Infrastructure and Platform

Jun 2022 – Jun 2023 | Full-time | Contract

- Reduced AWS infrastructure costs by 25% and production downtime by 30% through infrastructure optimization, observability improvements, and capacity right-sizing initiatives across distributed regional operations.
- Accelerated infrastructure provisioning by 35% through Terraform-based infrastructure standardization and infrastructure-as-code automation across multi-region cloud environments.
- Built regional DevSecOps and observability platforms using Terraform, ELK, Grafana, and Prometheus for distributed operations across 10+ countries.

Hungryhub | DevOps Engineer / Site Reliability Engineer

Jun 2020 – Jun 2022 | Full-time | Contract

- Maintained 99.8% platform uptime and reduced cloud infrastructure costs by 15% through Kubernetes reliability improvements, observability optimization, autoscaling, and reserved-instance strategies supporting high-traffic production workloads.

Independent Security & DevSecOps Consultant

Southeast Asia, Japan, and Europe · Jan 2021 – Present · Freelance · Project

- Delivered SOC 2, ISO 27001, and GDPR-aligned security initiatives across GCP environments, closing hundreds of cloud vulnerabilities and audit blockers for regional technology clients across Southeast Asia, Japan, and Europe, including Singapore public-sector related environments.
- Built Kubernetes, observability, and CI/CD security solutions supporting up to 99.95% uptime and up to 30% infrastructure cost reduction for regional clients.
- Implemented enterprise SSO, OIDC, workload identity federation, and PII protection controls across customer-facing platforms and engineering systems using Auth0 and Google Workspace.

Selected Clients: Tofu (Japan & Europe), Virtualspirit (Malaysia), EV Connection (Malaysia), EngageRocket (Singapore & Europe), Tebengan (Indonesia)

Skills

Cloud & Platform: AWS, GCP, Kubernetes, Terraform, Docker, ELK, Grafana, Prometheus

Security Engineering: SIEM/SOAR, Wazuh, CrowdStrike, Trend Micro XDR, Detection Engineering, Threat Hunting, MITRE ATT&CK

Identity & Access Management: OAuth2/OIDC, SAML, SSO, Auth0, CyberArk PAM, Google Workspace, Workload Identity Federation

DevSecOps & Application Security: CI/CD Security, SAST/DAST, Semgrep, API Security, Secret Scanning, Threat Modeling

Cloud & Infrastructure Security: Cloudflare WAF, Google SCC, Wiz CSPM, Zero Trust

Programming & Automation: Python, Bash, Golang, JavaScript, SQL

Governance & Compliance: ISO 27001, SOC 2, Sprinto

Certifications

AWS/GCP Cloud Architect, CISSP, CEH, Palo Alto Networks Cybersecurity

Education

Utel University — Computer Engineering · Jan 2023 – May 2025

Gadjah Mada University — Engineering Physics · Aug 2016 – Jul 2020
